DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1 and 54 have been considered but are moot in view of the new ground(s) of rejection.

Applicant requests reference to the claimed limitation of "a constellation storage" in the cited prior art patent. It appears that there was an editing error in the previous Office action, which as the result failed to explicitly address the limitation. This Office action corrects the error.

The rejection of claims 5,6,7,8,9,10,12,19,39,40,49,54,56,57,59,60,61,75,78 under 35 USC 112, second paragraph is withdrawn in light of the remarks which establishes that the definition described in the specification should be given to the claimed elements.

Claim Rejections - 35 USC § 102

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

3. Claims 1,4,18 and 54 are rejected under 35 U.S.C. 102(b) as being anticipated by Armstrong (US 4,381,546 submitted by applicant as part of IDS filed on September 12, 2006).

Claims 1 and 54.

Armstrong teaches a device for detecting impairments in a digital quadrature amplitude modulated signal comprising:

a phase noise detector (5C) comprising;

a sorter (see col.3, lines 44-68);

a rotator coupled to the sorter (see col.4, lines 5-6); and
a comparator (see col.4, line 18-21) coupled to the rotator;
a compression detector (5A);
an interference detector (5B); and
a constellation storage coupled to the phase noise detector, the compression detector, and the interference detector. Although the constellation storage is not shown its presence is easily inferred because in order to compare the rotated signal points to the ideal signal points, "a constellation storage" must be present to prestore the ideal signal points such as shown in Fig.3A.

Claims 4 and 18.

See col. 4, lines 7-13 for the recited vector. Specifically, a vector utilizing a matrix of $(1-j1)$, $-1-j1$, $-1+j1$ and $1+j1$), which are in fact cosine and sine matrix is multiplied to received signal points.

Claim Rejections - 35 USC § 103

4. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

5. Claims 14, 62 and 70 are rejected under 35 U.S.C. 103(a) as being unpatentable over Armstrong.

Armstrong fails to teach that the interference detector (Fig.5A) comprises an error calculator, a distribution chart and a data peak detector. But Armstrong teaches comparing

statistical properties of constellations and an error calculator, a distribution chart and a data peak detector would have been obviously included in the interference detector since these are well known parameters used in statistical analysis.

Allowable Subject Matter

6. Claims 17,19, 33-53, 73-80 are allowed.
7. Claims 3,5-13,40,56-61 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
